This is a description of a Matlab function called nma simplex.m that implements the matrix based simplex algorithm for solving standard form linear programming problem. It supports phase one and phase two. The function solves (returns the optimal solution (x^{last})) of the standard linear programming problem

I've been asked to write down a Matlab program in order to solve LPs using the Revised Simplex Method. The code I wrote runs without problems with input data although I've realised it doesn't solve the problem properly, as it does not update the inverse of the basis B (the real core idea of the abovementioned method). The problem is only related to a part of the code, the one in the bottom of ...

Hi, i have to thank you for coding "Simplex Big M" method, you have a nice focus, unfortunately your code doesn't work (not you fault). I had been reviewing your code and i think that we can solve that ERROR. Add the follow line in your code, for the case '=' in the line 74 of your code: `sc1(j,length(v_art))=0;`

MATLAB/Simplex tutorial SA305, Spring 2012 Instructor: Phillips In this document, we describe how to run simplex on a linear program. Please look in your text on p. 283 for the pseudo-code for Simplex. This is labeled "Algorithm 8.1 Basic Simplex Method." In what follows, we will refer to this pseudo-code. Please make sure you have Matlab running so that you can follow the tutorial along with ...

Simplex method is suitable for solving linear programming problems with a large number of variable. The method through an iterative process progressively approaches and ultimately reaches to the maximum or minimum values of the objective function. Principle of Simplex Method: ADVERTISEMENTS: It has not been possible to obtain the graphical solution to the LP problem of more than two variables ...
