Lorenz T. (Larry) Biegler is currently the Covestro University Professor in the Chemical Engineering Department at Carnegie Mellon University, which he joined after receiving his Ph.D. from the University of Wisconsin in 1981. His research interests lie in computer aided process engineering (CAPE) and include flowsheet optimization, optimization of systems of differential and algebraic equations, reactor network synthesis, and algorithms for constrained, nonlinear process control. Biegler ...

Larry Biegler is grateful to the Department of Chemical Engineering for releasing him of teaching duties for one semester to write this book. Ignacio Grossmann is grateful to the School of Chemical Engineering at Cornell University and to the Centre for Process Systems Engineering at Imperial College for having provided time and financial support for his sabbatical leaves in 1986D1987, and 1993D1994, respectively, in which most of the chapters on Part IV were written. Amazon.com: Systematic Methods of Chemical Process Design ...

The book presents a systematic approach to chemical process design, covering both continuous and batch processes. Starting with the basics, the book then moves on to advanced topics. Among the topics covered are: flowsheet synthesis, mass and energy balances, equipment sizing and costing, economic evaluation, process simulation and optimization. The book also covers specific chemical processes such as distillation systems, reactor networks, separation, and heat exchange networks. It shows ...

9780134924229: Systematic Methods of Chemical Process ...

A Solutions Manual is available; ISBN: 0-13-272337-9. Systematic Methods of Chemical Process Design is a textbook for undergraduate and graduate design courses. The book presents a step-by-step approach for learning the techniques for synthesizing and analyzing process flowsheets. The major items involved in the design process are mirrored in ...

Systematic Methods of Chemical Process Design - Lorenz T ...

Optimization: given a system or process, find the best solution to this process within constraints. Objective Function: indicator of "goodness" of solution, e.g., cost, yield, profit, etc. Decision Variables: variables that influence process behavior and can be adjusted for optimization.
