I found "The Satellite Communications Ground Segment and Earth Station Handbook" to be the single most comprehensive text on the topic. It's written in sufficient technical depth such that an RF engineer can readily understand the concepts from detailed explanations of earth station components to whole system operation. I'm relying on Bruce Elbert's text to validate the work I'm doing.

The subsystems present in the ground segment have the ability to access the satellite repeater in order to provide the communication between the users. Earth segment is also called as ground segment. Earth segment performs mainly two functions. Those are transmission of a signal to the satellite and reception of signal from the satellite.

Terminals used by service customers, including ISPs and end users, are collectively called the "user segment", and are typically distinguished from the ground segment. User terminals including satellite television systems and satellite phones communicate directly with spacecraft, while other types of user terminals rely on the ground segment for data receipt, transmission, and processing.

### **Ground segment - Wikipedia**

Satellite communication has two main components: the ground segment, which consists of fixed or mobile transmission, reception, and ancillary equipment, and the space segment, which primarily is the satellite itself. A typical satellite link involves the transmission or uplinking of a signal from an Earth station to a satellite.

The satellite-to-ground communication links rely on various ground stations (Kiruna, Fucino, Svalbard, and Villafranca - the latter as TT&C back-up) and the ESA data relay satellite system Artemis which will provide direct communication between Envisat and the ground even when the satellite is out of visibility of the ground stations. This will enable the use of high rate sensors whose data cannot be stored on board, more optimally managed tape dumps, and enhanced visibility for command and ...

While generally not driving as much hype as other technology trends in the satellite ecosystem, Ground Segment virtualization is arguably one of the most critical transformations the industry will experience in the coming years, as noted in NSR's Commercial Satellite Ground Segment, 4 th Edition report. Key to enabling scalability and flexibility of the networks, infrastructure vendors, integrators and operators are racing to adopt a new virtual framework. What are the key aspects of this ...

NSR's Commercial Satellite Ground Segment, 4th Edition is the longest-standing and most complete analysis and forecast of the commercial satellite ground equipment sector. The study leverages NSR's extensive and in-depth satellite industry knowledge and provides shipments and equipment revenues for all key industry segments:

### **Commercial Satellite Ground Segment, 4th Edition - NSR**

A ground station, earth station, or earth terminal is a terrestrial radio station designed for extraplanetary telecommunication with spacecraft (constituting part of the ground segment of the spacecraft system), or reception of radio waves from astronomical radio

sources. Ground stations may be located either on the surface of the Earth, or in its atmosphere.
